

Give Your Students a 24/7 Course Assistant

The Problem

You run courses or training programs. Students keep asking the same questions in chat, email, or Slack. You're spending hours answering stuff that's already in your course materials. A generic AI chatbot doesn't know your content — and it hallucinates when it guesses.

What You Get

A chatbot trained exclusively on your course materials. Students ask questions and get accurate answers pulled directly from your lessons, handouts, and FAQs. If the bot doesn't know, it says so — no guessing.

Deploy it on your website, LMS, or as a standalone tool. Your students get instant help. You get your time back.

How It Works

1. **Send me your course materials** — PDFs, slides, text files, FAQ docs
2. **I build the bot** — Trains on your content, deploys with a clean chat interface
3. **You embed it** — On your site, in your LMS, or as a standalone page

The Investment

€2,000 flat. Delivered in 1 week.

Includes: - Chatbot trained on your course materials - Web interface (embeddable or standalone) - Document ingestion pipeline - Docker deployment - 30 days post-delivery support
